

WORKSTATION REFRESH

01

Security

Old workstations pose a serious safety risk. They may not be able to receive updates, which can leave you open to cyberattack.

02

Performance

Old workstations may not be able to keep up with the demands of modern software and applications, leaving you listless.

03

Reliability

As workstations age they become subject to hardware failures, meaning you may find yourself with downtime and lost data.

04

Compatibility

Old computers cannot take advantage of the software that is becoming standard in business. This limits your business.

05

Cost-effectiveness

Replacing hardware becomes more cost effective than continuing to use outdated equipment. New equipment is more efficient and productive.
